WEB APP: ENTITY VIEW

Screen17 Web App: Entity View

The Screen17 Web App is a web-based platform that enables comprehensive sustainability performance insights on investment portfolios.

Designed to be both easy-to-use and flexible, it allows for the specification of individually selected sustainability criteria to screen portfolios providing an in-depth customized product that can be utilized on both a team-based and enterprise-wide scale.

While users can view the ESG performance and ratings of their entire Portfolio, the entity view is a new feature that provides an overall and in-depth view of how an individual entity performs within a portfolio.

Use the favourite option for entities worth monitoring regularly or for a quick comparison vs. another entity. Easily remove entities you are no longer following.

Main Features

The Entity View has 5 main features:

01 | Entity Summary

02 | Exclusion criteria alignment

03 | SDG score

04 | Sustainability Driver score

05 | PAI score

06 | Comparison of entities

01| Entity Summary

The entity summary displays an entity's GICS classifications - Sector, Industry Group, Industry and Sub-Industry. In this section it is also possible to mark an entity as a favorite, select another report date or entity for comparison. Additionally, overall summaries of the entity's criteria alignments, SDG score, top performing Sustainability Driver Scores, the Carbon Revenue Intensity Percentile, and the Paris Agreement commitment are available.

02| Exclusion Criteria Alignment

The Sustainability Criteria alignment enables users to select set Exclusion Criteria and to view either the alignment by individual driver category or add the SDG layer to show both the SDGs and corresponding sustainability drivers. It is also possible to search for specific SDGs and drivers to narrow down the alignment view.

03| SDG Scores

The SDG Scores section presents users with a breakdown of the entity's scores for each SDG as well as an aggregated score. The scores can be viewed as overall scores, Business Operations scores, and Products and Services scores.

04| Sustainability Driver Scores

Following on from the criteria alignment, the Sustainability Driver scores section allows users to view a breakdown of the top and bottom driver scores. The scores are separated into the Product and Business Operations dimensions and can be viewed as either an overall score or as a breakdown of the corresponding score components for each dimension.
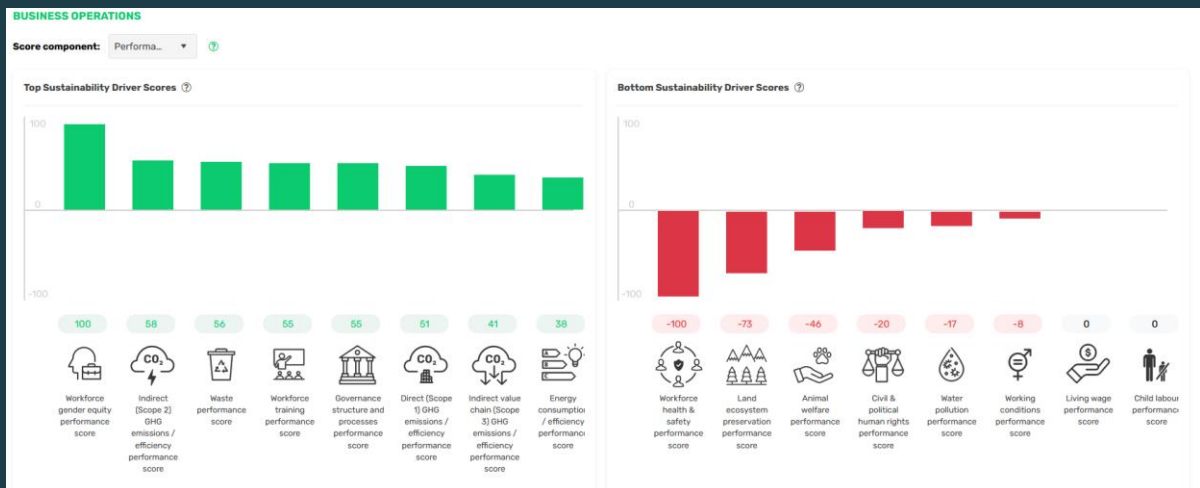

05| PAI Score View

Users are able to view the PAI percentile scores for the chosen entity. The industry percentile scores can reflect the GICS Sector, Industry Group, Industry, or Sub-Industry specific scores. Both the overall and industry percentile scores are shown and can be sorted in either ascending or descending order.

05| Entity Comparison

The final feature of the entity view is the ability to compare the selected entity to any other entity of choice. Users can search for those entities that were uploaded in any context of any portfolio bar.

The comparison shows the scores of the two companies side by side for all of the relevant categories:

Exclusion Criteria:

SDG Scores:
